Summary

Full stack engineer with 4+ years of experience shipping web applications, APIs and AI-powered features, building complete products from the data layer to the interface. Currently building a bioinformatics analytics and knowledge-graph platform at Skygenic; previously a Top Rated freelancer on Upwork, where clients came back for reliable delivery and clear communication.

Experience

Full Stack Engineer

Aug 2025 – Present

Skygenic – bioinformatics analytics and knowledge-graph platform for testing scientific hypotheses

- Designed, built and deployed a full-stack analytics platform for exploring pipeline outputs through interactive visualizations, session workspaces and visual pipeline tooling.
- Built React / TypeScript dashboards, a visual pipeline builder and an AI chat UI.
- Migrated the platform to an Nx monorepo with centralized state management, improving velocity and maintainability.
- Led performance work across frontend and backend that removed unnecessary re-renders and kept the app stable under real-time streaming.
- Architected the backend on Temporal, orchestrating hypothesis evaluation across five Python services.
- Built a crash-safe ETL for 40M+ records and designed the graph data model with a bioinformatician.
- Implemented streaming and retrieval patterns for large CSV / TSV datasets, improving latency and responsiveness.
- Built the FastAPI / PostgreSQL REST API and closed a cross-tenant data-exposure hole.
- Shipped LLM features: structured-output reports, a GraphRAG agent, streaming chat and MCP tools.
- Added observability: status-aware indexing, incremental refresh and operational endpoints for production troubleshooting.
- Delivered access-controlled file operations and artifact lifecycle management.
- Added a transactional outbox and contract tests that caught silent cross-service failures.
- Ran Docker and CI/CD deployments to dev and prod, and wrote design specs and performance benchmarks for the team.

Full Stack Developer (Freelance)

Mar 2022 – Aug 2025

Upwork – web applications, APIs and AI features for startups and small businesses

- Delivered 10+ web, mobile, API and cloud projects for clients on AWS and GCP.
- Built scalable APIs, real-time features and complete full-stack products end to end.
- Built AI integrations, including RAG pipelines and LLM-powered workflow automation.
- Worked closely with clients to turn requirements into production features, earning repeat engagements.
- Earned and maintained Top Rated status through reliable delivery and clear communication.

Skills

Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS

Frontend: React, Next.js, Redux Toolkit, Nx, Vite, Tailwind, Material UI, ECharts, D3, Blockly

Backend: Node.js, Express, Fastify, FastAPI, Django, GraphQL, Prisma, SQLAlchemy, Celery, Socket.io

Distributed systems: Temporal, RabbitMQ, WebSockets, SSE

Data: PostgreSQL, MySQL, MongoDB, Redis, Neo4j, BigQuery, Firebase

AI / LLM: OpenAI API, LangChain, LangGraph, Vercel AI SDK, RAG, MCP

DevOps & testing: Docker, AWS, GCP, GitHub Actions, Jenkins, nginx, Linux, Git, Vitest, pytest

Education

Master of Computer Science (MCS)

2021 – 2023

Virtual University of Pakistan

B.Sc. Computer Science

2015 – 2018

Quaid-i-Azam University

Certifications

Harvard (edX): Databases with SQL (CS50). **IBM:** DevOps Essentials, Git and GitHub Essentials, Web Development with HTML, CSS & JavaScript, Introduction to Cloud Computing. **AWS:** AWS Cloud Technical Essentials. **Meta:** Django Web Framework, Introduction to Databases for Back-End Development, Introduction to Databases, Introduction to Back-End Development, Programming in Python, Version Control. **Google:** Foundations: Data, Data, Everywhere.
